## **DETAILED ACTION**

### ***Status of Claims***

Claims 1-3 and 17 are pending in this application.

Claims 4-16 have been cancelled.

### ***Response to Amendment***

The amendment filed October 26, 2007 has been received and acknowledged by the Examiner.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-16 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Hitoshi et al (JP 2002-226871).

Hitoshi et al disclose a method for gasifying plastics with high temperature and high pressure super critical water in the presence of an inorganic oxide and/or inorganic hydroxide to crack the plastics to effect corrosion into low-molecular weight compounds such as corresponding monomer components (please see translated abstract).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-3 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hitoshi et al.

Applicant claims a process for decomposing a polymer into a monomer or oligomer comprising hydrolyzing the polymer with sub or super critical water in the presence of a water insoluble base, the water insoluble base specifically being CaCo<sub>3</sub>.

**Ascertainment of the difference between the prior art and the claims**

**(MPEP §2141.02)**

The difference between the prior art and the claims is that Hitoshi et al does not specifically use CaCo<sub>3</sub> as it's inorganic oxide.

**Finding of prima facie obviousness**

**Rational and Motivation (MPEP §2142-2143)**

One having ordinary skill in the art at the time of the instant invention would find it obvious to utilize  $\text{CaCO}_3$  as an inorganic oxide as it is stated in the disclosure of Hitoshi et al that any inorganic oxide may be used. One having ordinary skill in the art at the time of the instant invention would be motivated to use  $\text{CaCO}_3$  as it's inorganic oxide with a reasonable expectation of success based on cost and availability of products.
